Math.Cast.ToSingle

```
Single Math.Cast.ToSingle(Object value)
```

API	http://api.avolites.com/10.1/Math.Cast.ToSingle.html
description	Returns an object cast to a float. An exception will be thrown if the cast is invalid. This operation translates an object value to a single value, see Types.
Namespaces	Math.Cast
parameter	value (Object) : The value to be translated.
return value	(Single)

Example in

changexfade:

```
<step>ActionScript.SetProperty("Playbacks.Editor.Times.ChaseFixtureOverlap",
Math.Cast.ToSingle(1))</step>
```

Also used in

- Chase - Change a chaser's overlap
- Legend - Get a cuelist cue's legend
- Function list
- Single
