description:	Macros to change page of the Titan Mobile Faderwing
remarks:	useful with the simulator as this lacks the ability to change the pages in the Mobile Wing window.

[mobile](#), [wing](#), [change](#), [page](#)

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

Each macro simply calls a specific `ChangePage()` function with the index of the designated page.

How to use it

1. [make this macro available](#)
2. If you copy this macro to a hardware macro button this will vanish when changing its page. Consider setting its properties to Handle Paging Locked in playback options.
