    <step>Handles.SapphireWingBBottom.ChangePage(59)</step>
  </sequence>
</macro>
</avolites.macros>
```

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

Each macro changes all hardware handles to a particular page by calling the respective ChangePage() function. Please note that the page number is a 0-based index.

How to use it

1. [make this macro available](#)
2. If you copy this macro to a hardware button this will vanish when changing its page. Consider setting its properties to Handle Paging Locked in playback options.
