| description: | makes a specific cuelist go back |
| remarks: | snippet which explains CueLists.GoBack(Handle handle) |

functions

- [CueLists.GoBack](#)

Code

```
<step>CueLists.GoBack("Location=Playbacks,2,1")</step>
```

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

This simply calls the function `CueLists.GoBack()` with a designated handle as argument. The handle "Location=Playbacks,2,1" translates to 'Playbacks, page 2, 1st playback' - this is the 'real' fader playbacks (see [Identifiers](#)). *tested - S. Beutel*

How to use it

This is an example oneliner - you need to pack it into a macro file before you can use it in Titan. Example to be used in your own macros.
