description:	Changes fan curves, grouping and parts
remarks:	

adb_fancurves.xml

fan, curve, group, segment, part

This selection of macros lets you change the fan curve, parts and grouping options without having to enter the fan menu. These macros have Active Binding set so they will highlight when the corresponding attribute is set

The code below is a snippet of the whole file which contains macros for all curves, grouping options and a handful of segments/parts.

functions

- Programmer.Editor.Fixtures.Fan.SelectCurve
- Active Binding

affected properties

- Programmer.Editor.Fixtures.Fan.SelectedFanCurveId
- Programmer.Editor.Fixtures.Fan.GroupOptions
- Programmer.Editor.Fixtures.Fan.SegmentCount

Code

fancurves.xml

```
<?xml version="1.0" encoding="utf-8"?>
<avolites.macros>

  <!-- Fan curves: Line, Mirror, Wings, Arrow, Pull Middle, Pull Ends,
Pull End-->
  <macro id="adb.Macros.fan.Line" name="adb fan Line">
    <active binding="{propertyLink
id='Programmer.Editor.Fixtures.Fan.SelectedFanCurveId'
converter='Math.EqualityConverter' converterParameter='Line'}"/>
    <sequence>
```

```
      <step>Programmer.Editor.Fixtures.Fan.SelectCurve("Line")</step>
    </sequence>
  </macro>

  <!-- Fan Grouping -->
  <macro id="adb.Macros.fan.FanWithinGroup" name="adb fan
FanWithinGroup">
    <active binding="{propertyLink
id='Programmer.Editor.Fixtures.Fan.GroupOptions'
converter='Math.EnumAsStringEqualityConverter'
converterParameter='FanWithinGroup'}"/>
    <sequence>
<step>ActionScript.SetProperty.Enum("Programmer.Editor.Fixtures.Fan.Gro
upOptions", "FanWithinGroup")</step>
    </sequence>
  </macro>

  <!-- Fan Parts -->
  <macro id="adb.Macros.fan.3part" name="adb fan 3part">
    <active binding="{propertyLink
id='Programmer.Editor.Fixtures.Fan.SegmentCount'
converter='Math.EqualityConverter' converterParameter='3'}"/>
    <sequence>
<step>ActionScript.SetProperty("Programmer.Editor.Fixtures.Fan.SegmentC
ount",3)</step>
    </sequence>
  </macro>

</avolites.macros>
```

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to Formats and syntax

- `Programmer.Editor.Fixtures.Fan.SelectCurve("Line")` sets the `SelectedFanCurveId` to "Line"
- `Programmer.Editor.Fixtures.Fan.GroupOptions` is the property regarding the grouping options and needs to be set via `ActionScript.SetProperty.Enum`
- `Programmer.Editor.Fixtures.Fan.SegmentCount` the number of parts the fan is split into and again needs to be set via `ActionScript.SetProperty`
- `active binding` is used to highlight a macro when the corresponding property (`propertyLink id`) matches the `converterParameter`. A good starting point to understand active binding is either this wiki or this post in the Avo forum http://forum.avolites.com/viewtopic.php?f=20&t=5962

How to use it

- make this macro available
