

Example

Record Playback and set userNumber

by:	question by Sebastian Beutel, solution: Gregory Haynes, June 2018
published:	http://forum.avolites.com/viewtopic.php?f=20&t=5783
description:	records a playback with a fixed <code>userNumber</code>

Snippet only, just for documentation.

[record](#), [playback](#), [usernumber](#)

functions

- [Playbacks.StoreCue](#)
- [Handles.SetSourceHandle](#)
- [ActionScript.SetProperty](#)
- [Handles.SetUserNumber](#)
- [Handles.ClearSelection](#)

affected properties

- [Handles.CurrentUserNumber](#)

Code

```
<step>Playbacks.StoreCue("PlaybackWindow", 1000, false);</step>
<step>Handles.SetSourceHandle("PlaybackWindow", 1000);</step>
<step>ActionScript.SetProperty("Handles.CurrentUserNumber",
userNumber:10000);</step>
<step>Handles.SetUserNumber();</step>
<step>Handles.ClearSelection();</step>
```

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to [Formats and syntax](#)

This stores a playback and sets its usernumber. As mentioned in the forum this isn't possible in one go - hence, at first the playback is stored to a specific location, and then the handle in this location is set to a particular usernumber.

How to use it

Snippet only - to be used in a larger context.
