Example

Legend - Set a chase cue's legend

by:	Kim Wida, Feb 2018
published:	http://forum.avolites.com/viewtopic.php?f=20&t=5554
description:	Change a chase cue's legend to show a specific profile ID
remarks:	In its form it is of almost no practical use, but an example of how to get some information (in that case: the profile ID) displayed.

chase, cue, legend, profile, cast

functions

- Playbacks.SetCueLegend
- Math.ToString
- Profiles.GetHandleProfileId

Code

setLegendToProfileId.xml

```
<?xml version="1.0" encoding="utf-8"?>
<avolites.macros xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="Avolites.Menus.xsd">
 <macro name="" id="">
    <description></description>
    <sequence>
      <step>Playbacks.SetCueLegend(handle:"chaseHandleUN=10555", 1,
Math.ToString
(Profiles.GetHandleProfileId(handle:"chaseHandleUN=10555")))</step>
     </sequence>
  </macro>
</avolites.macros>
```

Explanation

This explains the functional steps within the sequence. For all the other XML details please refer to Formats and syntax

As stated above this example is of limited use for operating Titan but helps you get the ID of the profile. This ID is an int number, identifying the assigned key profile on that handle. Usually this is dealt with strictly internally. this macro was written in order to get the profile ID out.

- `Profiles.GetHandleProfileId(handle:“chaseHandleUN=10555”)` returns the ID of the assigned key profile

- `Math.ToString()` converts this ID, which is an integer number, to a string which can then be assigned as legend
- `Playbacks.SetCueLegend(handle:“chaseHandleUN=10555”, 1,…)` sets this string as legend for cue #1 of a specific chase

How to use it

1. edit to meet your needs (or set a chaser to userNumber 10555) and make this macro available
2. call this macro to retrieve the profile ID of this specific chase, which will be displayed as legend for its cue #1
