> The next and previous page functions unfortunately do not work properly for workspace windows as they attempt to loop around the maximum number of pages. For the playback faders this is 60, so when you are on that page pressing next page will take you to page 1 and the opposite is true with previous page. However workspace windows do not have a predefined maximum page number so this is set to zero which means that next page always loops around to page 1 and when on page 1 previous page will take you to the maximum page which is zero. One work around is to set the page directly e.g.:
>
> ```
> Handles.Beams.ChangePage(Handles.Beams.Page.Index + 1)
> ```
>
> Note however that this doesn't do any error checking so will allow you to go to any page number including negative page numbers.

Example in

Pages - Change All Playback Pages:

```
<macro id="Avolites.Macros.ChangeToPage1" name="Playbacks Page 1">
  <description>Changes the playbacks page to page 1.</description>
  <sequence>
    <step>Handles.Playbacks.ChangePage(0)</step>
  </sequence>
</macro>
```

Also used in

- Pages - Change Pages
- Change Pages with Timecode
- Pages - Change All Playback Pages
- Pages - Toggle to page 1 and back
- Function list
