Function

Math.EqualityConverter

```
Boolean Math.EqualityConverter(string StringToCheckAgainst)
```

API	currently not in the API
description	ASSUMPTION this checks if a parameter equals to a given string and returns true if it does
namespace	Math
parameter	StringToCheckAgainst (String) : string to compare the parameter with
	Parameter (String) : the property to check whether it matches the string. This needs to be set separately, see example
return value	Boolean

Hint: there is another Math.EqualityConverter explained at https://github.com/RicoSuter/MyToolkit/blob/master/src/MyToolkit.Extended/Converters/EqualityConverter.cs:

> Returns a bool whether the objects string representation equals to the converter parameter.

Example in

Fan - Curve

```
  <active binding="{propertyLink
id='Programmer.Editor.Fixtures.Fan.SelectedFanCurveId'
    converter='Math.EqualityConverter'
    converterParameter='Line'}"/>
```

Here, the property `Programmer.Editor.Fixtures.Fan.SelectedFanCurveId` is tested if it matches the string `Line`, and if yes, the key the macro is saved on is highlighted active.

Also used in

- Fan - Curve
