

Function

# Math.EqualityConverter

Boolean Math.EqualityConverter(string StringToCheckAgainst)

<b>API</b>	currently not in the API
<b>description</b>	ASSUMPTION this checks if a parameter equals to a given string and returns true if it does
<b>namespace</b>	Math
<b>parameter</b>	StringToCheckAgainst ( <a href="#">String</a> ) : string to compare the parameter with Parameter ( <a href="#">String</a> ) : the property to check whether it matches the string. This needs to be set separately, see example
<b>return value</b>	<a href="#">Boolean</a>

**Example in**[Fan - Curve](#)

```
<active binding="{propertyLink  
id='Programmer.Editor.Fixtures.Fan.SelectedFanCurveId'  
converter='Math.EqualityConverter'  
converterParameter='Line'}"/>
```

Here, the property `Programmer.Editor.Fixtures.Fan.SelectedFanCurveId` is tested if it matches the string `Line`, and if yes, the key the macro is saved on is highlighted active.

**Also used in**

- [Fan - Curve](#)
