

Math.IsEqual

Boolean `Math.IsEqual(Object x, Object y)`

API	http://api.avolites.com/10.1/Math.IsEqual.html
description	Returns whether the two values are equal or not.
namespace	Math
parameter	x (Object) : The value to compare with y. y (Object) : The value to compare with x.
return value	Boolean True is equal and false otherwise.

Example in

Chase - Double speed:

```
<step condition="Math.IsEqual(Playbacks.Editor.Times.ChaseSpeed, 0.0)">...</step>
```

This step is only executed if the property `Playbacks.Editor.Times.ChaseSpeed` equals 0.0
