

Function

# Playbacks.SetPlaybackLevel

Single `Playbacks.SetPlaybackLevel(Handle srcHandle, LevelAdjust level)`

<b>API</b>	<a href="https://api.avolites.com/12.0/Playbacks.SetPlaybackLevel.html">https://api.avolites.com/12.0/Playbacks.SetPlaybackLevel.html</a>
<b>description</b>	Sets the level of a playback.
<b>namespace</b>	<code>Playbacks</code>
<b>parameter</b>	<code>srcHandle ( Handle )</code> : The playback handle. <code>level ( Leveladjust )</code> : The level.
<b>return value</b>	<code>Single</code> tba - the API states that this returns a single but I have no idea what this value might be useful for.

### Example in

[Cuelist - Set Me At Full](#):

```
<step>Playbacks.SetPlaybackLevel(this, level:1)</step>
```

In this cuelist macro this refers to the cuelist which is set to full with `level:1`.

### Also used in

- [Cuelist - Set Me At Full](#)
