

Function

Timecode.Context.Pause

```
Void Timecode.Context.Pause()
```

API	http://api.avolites.com/11.0/Timecode.Context.Pause.html
description	Pauses the timecode timer in Titan.
namespace	Timecode.Context
parameter	none
return value	Void

Titan v11 introduced four separate timecode sources. Subsequently, there are now functions like Timecode.TimecodeOne.Pause, Timecode.TimecodeTwo.Pause etc. Timecode.Context.Pause has the same effect like Timecode.TimecodeOne.Pause and is believed to also work in pre v11 versions which had only one global Timecode source.

Example in

[Timecode - Start/Stop:](#)

```
<step>Timecode.Context.Pause()</step>
```

Also used in

- [Timecode - Start/Stop](#)
