

Namespace

Windows.SetWindowProperty

Namespaces are not listed nor explained in the online API documentation. Hence, the description is merely guessed.

This namespace holds undocumented functions to alter specific window's attributes. As these are direct attributes and not elements, the standard functions like [ActionScript.SetProperty](#) cannot be used. Instead use the functions in this namespace. See also [Windows](#).

Items in this namespace:

Properties

Plugin Backlinks: Nothing was found.

Functions

- [Windows.SetWindowProperty.Height](#)
- [Windows.SetWindowProperty.Width](#)
- [Windows.SetWindowProperty.X](#)
- [Windows.SetWindowProperty.Y](#)
