

Titan Property

Handles.PlaybackWindow.Page.Index

ASSUMPTION

This function is not documented and simply deducted from other factory macros, and found working. Hence, this entire documentation is assumed.

Also, this is where properties and identifiers cross as identifiers of course are properties. Hence also refer to [Location](#)

API	./.
description	The internal index of the playback window page, starting from 0.
Namespaces	Handles.PlaybackWindow.Page
type	Int32

example

```
ActionScript.SetProperty("UserMacros.CurrentUserNumber",  
Handles.PlaybackWindow.Page.Index)
```

This stores the current page index temporarily in the property `UserMacros.CurrentUserNumber`.

See also <http://forum.avolites.com/viewtopic.php?f=20&t=5786>.

used in

- [Playback - Record to fixed location](#)
- [Toggle Windows Page temporarily](#)
- [Location](#)
