Cameo_Pixbar650CPro

This is another example for creating a vis file (old visualiser personality) from a d4 file (Titan personality). The fundamentals are described in Creating vis files from d4 personalities. Here, only the little details are explained.

- this fixture has subfixtures (cells) a feature neither the classic consoles nor the visualiser support
- instead, we build a vis personality which at least shows cell #1 so that we have an impression if the fixture should work
- colour temperature control is not supported
- patterns and sound are not implemented in the visualiser (they are in no visualiser I know of)

Apart from that it works reasonably well in the visualiser.

The DMX table:

(full DMX tables are in the manual which is included in the zip below)

CH1	Dimmer	000	-	255	Master Dimmer 0-100%
		000	-	005	Strobe open
		006	-	010	Strobe closed
		011	-	033	Puls Random, slow -> fast
		034	-	056	Ramp up Random, slow -> fast
CH2	Strobe	057	-	079	Ramp down Random, slow -> fast
		080	-	102	Random Strobe Effect, slow -> fast
		103	-	127	Strobe Break Effect, 5s1s (Very Short Flash)
		128	-	250	Strobe slow -> fast 0Hz - 20Hz
		251	-	255	Strobe open
CH3	Red	000	-	255	0% to 100%
CH4	Green	000	-	255	0% to 100%
CH5	Blue	000	-	255	0% to 100%
		000	-	005	Colour off
		006	-	013	Red
		014	-	021	Amber
		022	-	029	Yellow warm
		030	-	037	Yellow
		038	-	045	Green
		046	-	053	Turquoise
		054	-	061	Cyan
	Colour Macro	062	-	069	Blue
CH6	(override	070	-	077	Lavender
	RGB)	078	-	085	Mauve
		086	-	093	Magenta
		094	-	101	Pink
		102	-	109	Warm White
		110	-	117	White
		118	-	125	Cold White
		126	-	128	Colour Jumping Stop
		129		192	Colour Jumping Speed slow -> fast / Colour 1 -> 12
		193	-	255	Colour Fading Speed slow -> fast / Colour 1 -> 12
CH7	Colour Tem-	000	-	005	off
CH/	perature	006	-	255	cold to warm
		000		005	Pattern off

Most importantly, when setting the Classic Pearl References in the Personality Builder, we also need

to add the attributes to the respective Compatibility Attributes sections of the multicell modes as this is where R20 and VIS files are created from:

- check Classic Pearl References as described
- add references for the 26ch and the 30ch modes (I used UKCM65C5 and UKCM65C6)
- unfold both modes (left panel)
- click on Compatibility Attributes (left)

PIXBAR 650CPRO	Athbutes Functions Created Athbutes Cu	ment Functions History Modes Macros Palettes Swatch
		Red Green Blue & Auto + Sound C Master Denner
⊕- State B-J ^D Compatibility Attributes B- ♣ 30 DMX	26 DMX	
- Macros	V Node	
III Palettes	Channels	26
	Hidden	False
	Nane	26 DMX
	 References 	
	AtlaBase Mode ID	00000000-0000-0000-0000-00000000000
	Classic Pearl Reference	UKCM65C5
	Diamond 2/3 Reference	
	RDM Mapping	
	Name How this mode will be displayed in your console	's satch menu.

• top-right, in the Created Attributes tab, doubleclick on the attributes you want in that mode (26ch: Dimmer, Shutter, Red, Green, Blue; 30ch: Dimmer, Shutter, Red, Green, Blue, Colour Macro, CTO, Auto, Sound) - the attributes are assigned channels in the order you add them, thus adding in the correct order makes life easier

See Cameo PIXBAR 650CPRO - Personality Builder							_		×

E- R PIXBAR 650CPRO	Athbutes Fund	ions Created Atributes	Current Functions	Hatory Mode	a Macros	Palettes	Swato	h		
	Colour Macro Colour Macro Shutter	C Shutter CTD	Red V Auto	₩Gree + Sour	•	Bu	_			
Compatibility Attributes	26 DMX								=	
Shutter	✓ Mode									
Red	Channels		26							
	Hidden			lae						
Bue	Name 26 DMX									
	 References AtaBase Mode 		10. 00000			0000000-0000-0000-0000-0000000000				
Macros	Classic Pearl					UNEM65C5				
in ration	Diamond 2/3		- E		,					
	RDM Mappin			<u> </u>					_	
		I be displayed in your cor		e Values Cells						

The coubleclick adds each attribute to the selected mode (here: compatibility attributes). Alternatively you can drag and drop the attributes there.

 now we need to check/correct the channels for each Compatibility Attributes section. Click on Compatibility Attributes (left), then on the tab Channel (bottom right). Check (and correct) the channel offsets as required, 2025/08/18 08:30

- The Manual - The	el Assignment Assign 🛛 🖓 S	how Compatibility Att	ibutes		
A Modes Mode: 3	O DMDC				
(i) - 1 3 DMX m1	Name	Resolution	Channel Offset		
	Dimmer	8 Bit	1		
(1) 6 PMM	Shutter	8 Bit	2		
⊕ 4 26 DMX	Red	8 Bit	3		
🖻 🛓 30 DMX	Green	8 Bit	4		
	Blue	8 Bit	5		
Cells Corpetbility Atributes	Colour Macro	8 Bit	27		
Domer	СТО	8 Bit	28		
	Auto	8 Bit	29		
- Red -	Sound	8 Bit	30		
Bue Coor Marro Coor Coor Coor Coor Sound Sound Palettes					

Now you can proceed with generating R20 and VIS files as described.

In between generating the files you'll get the error message

Error	×
\otimes	The pearl reference, "", for the mode "Cell" is invalid. Skip mode and continue?
	OK Abbrechen

This is normal as we don't need R20 and VIS files for the hidden Cell mode. Click 0K to skip and continue.

Checking and editing the VIS files is straight-forward - simply adjust the DMX ranges, add missing ranges, change some fixed colour ranges to colour scroll ranges:

- m1 2ch (UKCM65C1.VIS)
 - Color Wheel 1: adjust 1st range, change last ranges to speed (color change)
- m2 3ch (UKCM65C2.VIS)
 - Shutter: adjust range dmx end
 - Color Wheel 1: adjust 1st range, change last ranges to speed (color change)
- m3 3ch m2 (UKCM65C3.VIS) not in DMX chart, seems to be okay for RGB, leave it untouched
- m4 9ch (UKCM65C4.VIS)
 - Shutter: adjust range dmx end, add last Open range (251~255)
 - Color Wheel 1: adjust 1st range, change last ranges to speed (color change)
 - CTO/Color Wheel 2: adjust range dmx end
- m5 26ch (UKCM65C5.VIS)
 - Shutter: adjust range dmx end, add last Open range (251~255)
- m6 30ch (UKCM65C6.VIS)
 - Shutter: adjust range dmx end, add last Open range (251~255)
 - Color Wheel 1: adjust 1st range, change last ranges to speed (color change)
 - $\circ\,$ CTO/Color Wheel 2: adjust range dmx end

Example: changed Shutter definition:

The edited and tested files are in this zip:

cameo_pixbar650cpro.zip

Refer to Creating vis files from d4 personalities for more details.
