Titan Tricks

Installing the loopback adaptor

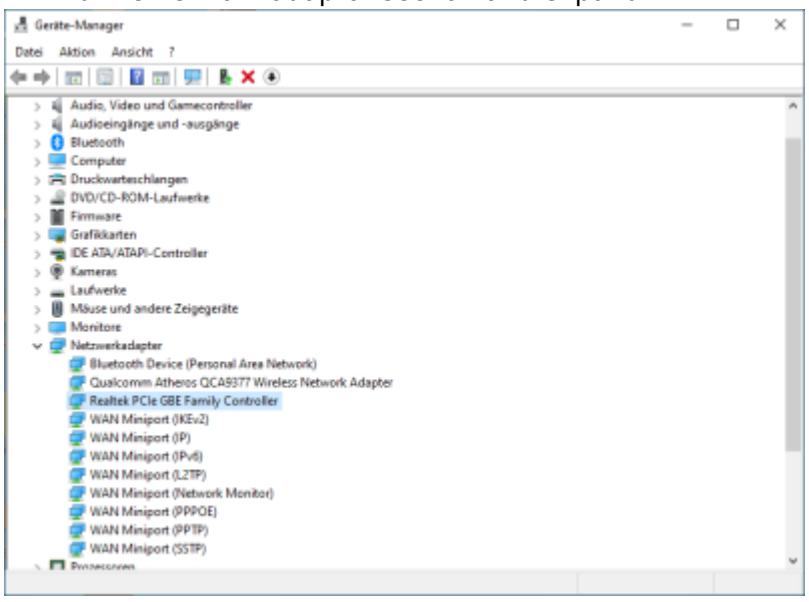

Sometimes it's useful to have the loopback network adaptor installed so that other programs on the same machine can control - or be controlled by - Titan. Here is how to install this:

1. Open Windows' device manager. You may do so by hitting the Windows key, and typing 'devmgmt',

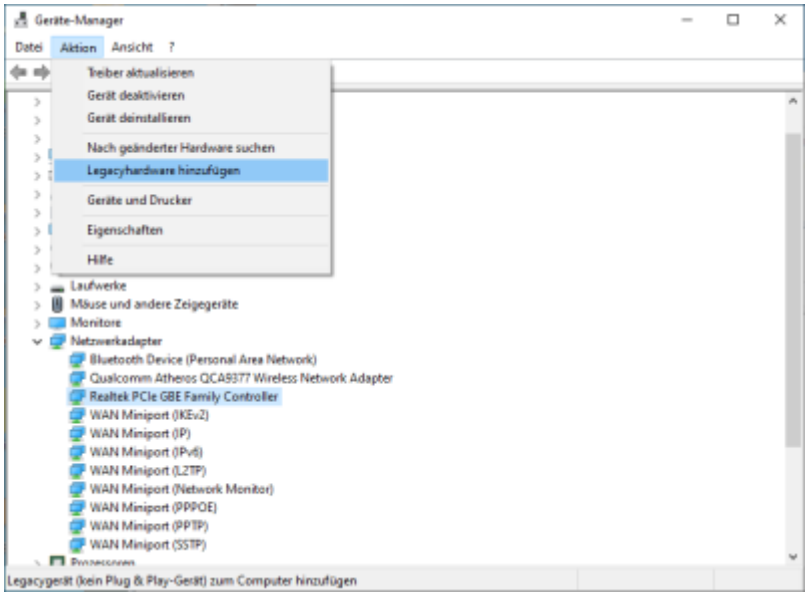

followed by `Enter`.

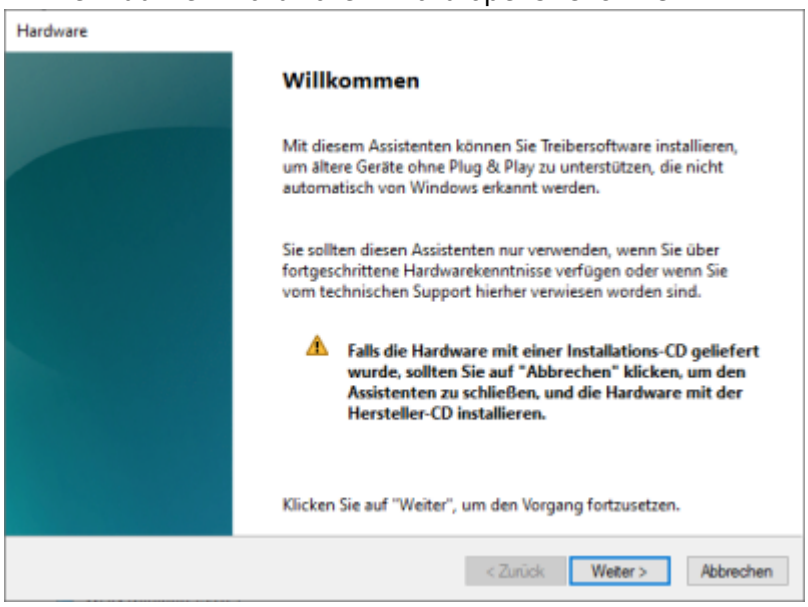

2. Find the network adaptor section and expand it.

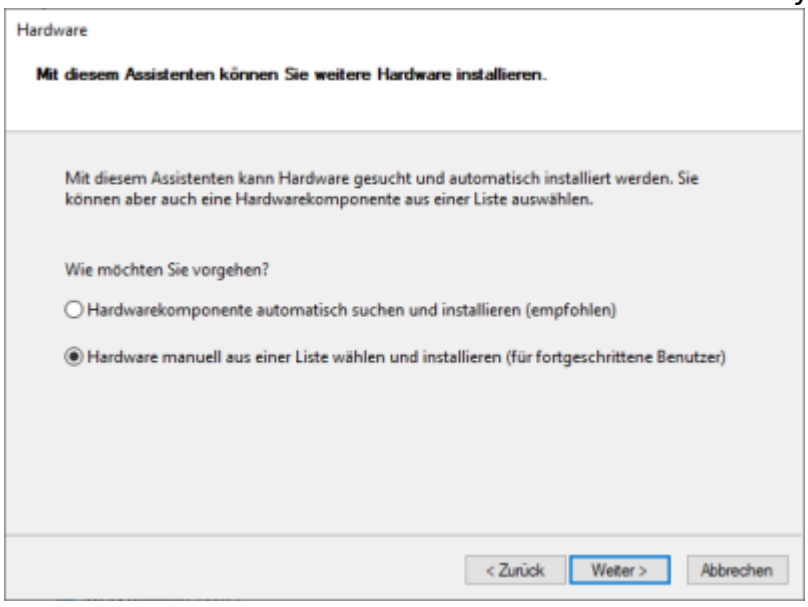

3. From the `Action` menu select `Add Legacy Hardware`.

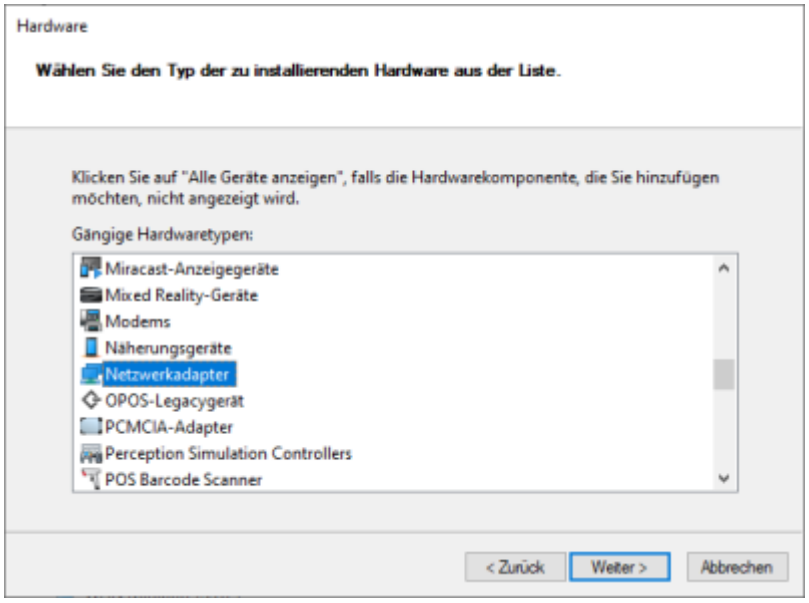

4. The 'Add New Hardware' wizard opens. Click `Next`.

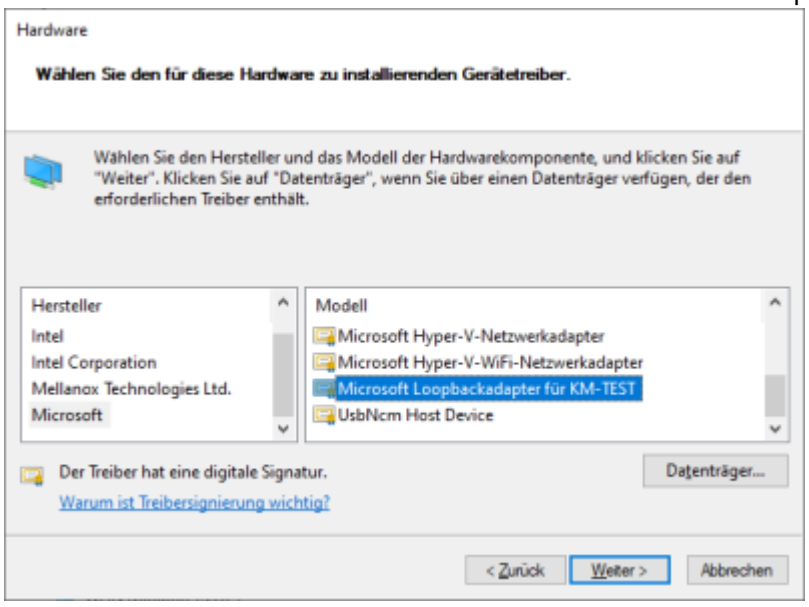

5. On the next screen select `Choose hardware manually` and click `Next`.

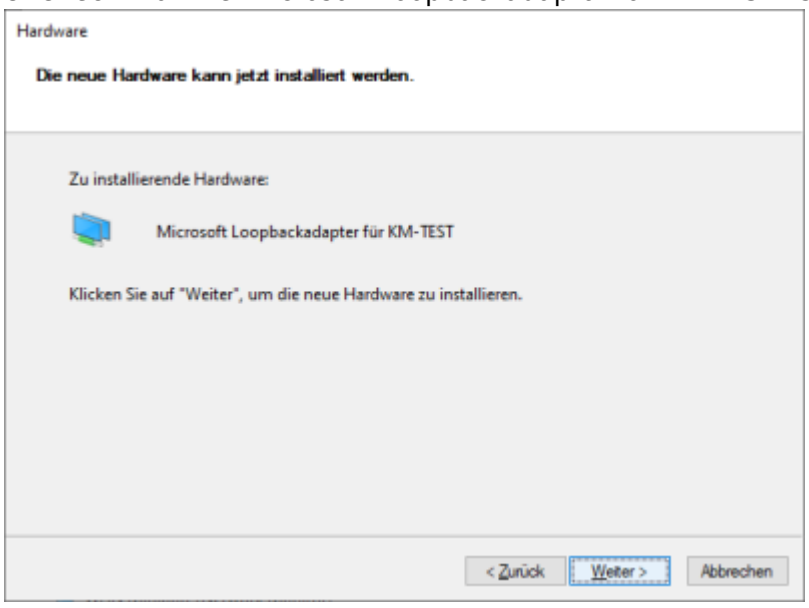

6. Select hardware type 'Network adaptors' and click `Next`.

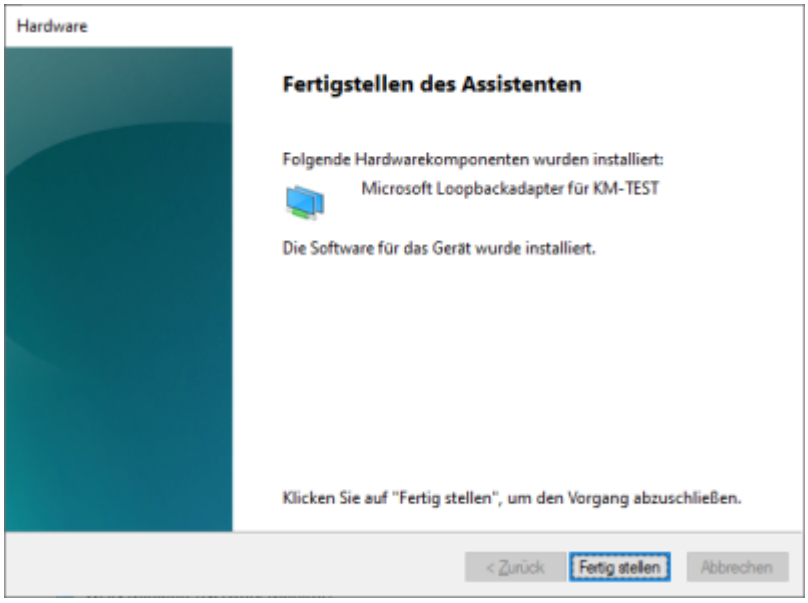

7. Select manufacturer 'Microsoft' and model 'Microsoft Loopbackadaptor for KM-TEST' and click `Next`.

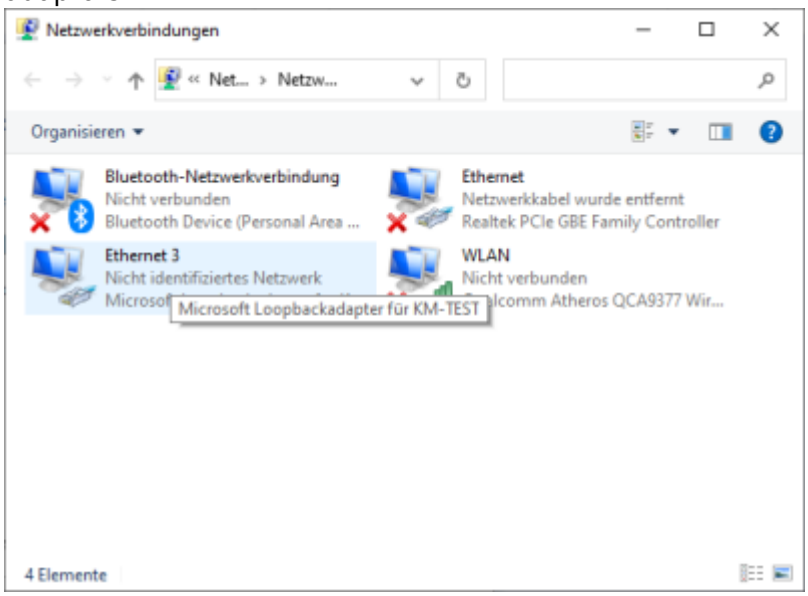

8. Check that the 'Microsoft Loopbackadaptor for KM-TEST' is selected and click `Next`.

9. This confirms the successful installation. Click `Finish`.

10. Now in network settings a new Ethernet connection is shown, and can be configured like other adaptors.
