Web API example

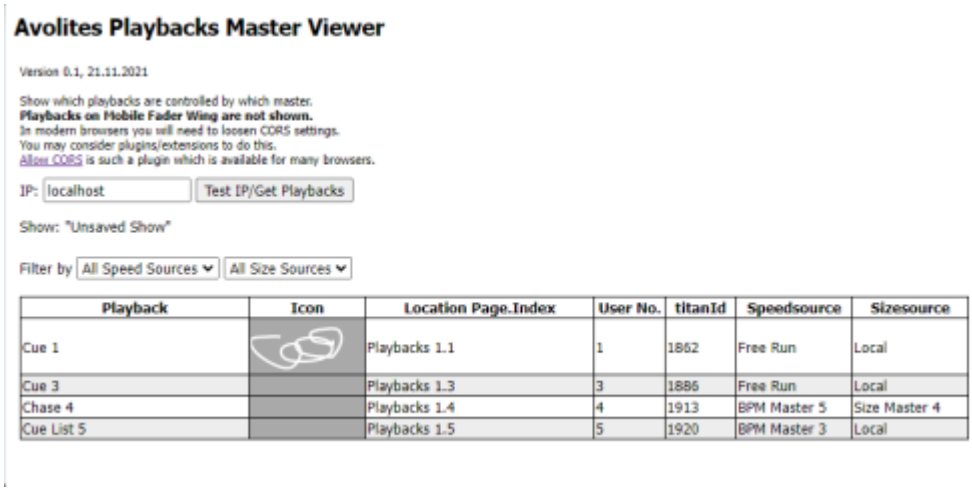

Playback Masters

Lists (almost) all playbacks, shows which masters they are using, and allows some filtering.

author, date	Sebastian Beutel, November2021
published	https://www.avolites.de/downloads/icke_siegen/PB%20Masters/
prog. lang./ framework	HTML, JS, CSS; none (wrote everything with a text editor
description	Shows which playbacks are controlled by which master. Idea from https://www.facebook.com/groups/Avolites/posts/2356283491170538/
other requirements	e.g. a web browser is required

WebAPI currently does not show all handle groups. Hence playbacks on the Titan Mobile Faderwing or unassigned handles (still in the show library) are not shown with this tool.

Screenshots

How it works

`Test IP/Get Playbacks` reads all the current playbacks, puts them into an array, and then shows this array in a table. Additionally you can filter the array by speedsource and sizesource.

API Requests

- System/SoftwareVersion
- Show/ShowName
- Handles
- playback
