Web API example

Playback Timestamp

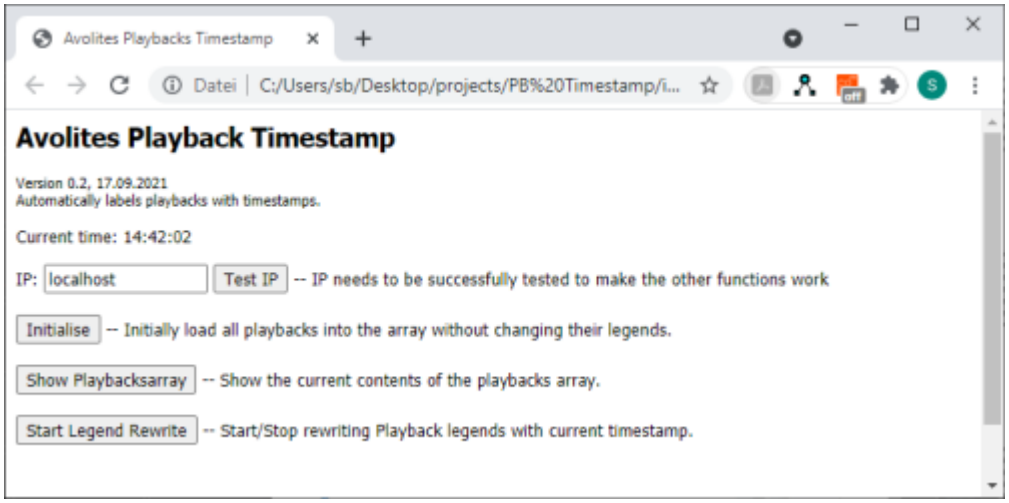

Automatically sets legends of new playbacks to the current timestamp.

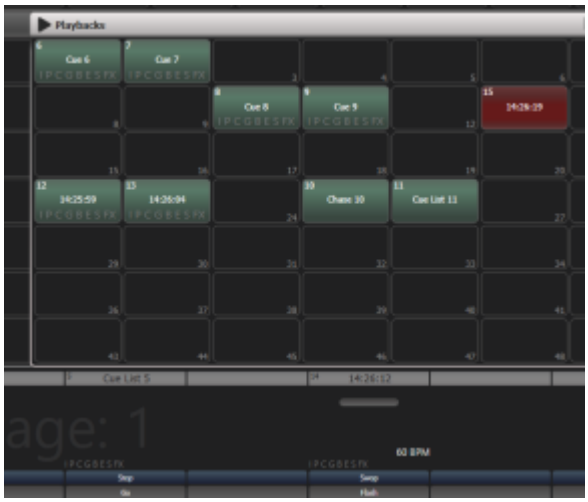

author, date	Sebastian Beutel, September 2021
published	https://www.avolites.de/downloads/icke_siegen/PB%20Timestamp/

Screenshots

How it works

`Initialize` reads all the current playbacks and puts them into an array.

`Show Playbacksarray` shows the current contents of this array.

`Start Legend Rewrite` starts the real process: every second the playbacks are requested and compared to the playback array. If a playback is not in the array - which means it is new - its legend is set to the current time.

API Requests

- System/SoftwareVersion
- Handles
- Handles_SetSourceHandleFromHandle
- ActionScript_SetProperty_String
- Handles_SetLegend
