Web API example

Web API Demo

Simple website to trigger Web API requests with buttons and faders

author, date	Sebastian Beutel, 2016
published	https://www.avolites.de/support-downloads/web-api-demo
prog. lang./ framework	HTML, JavaScript, CSS No framework used
description	see link above for a full explanation
other requirements	a web browser is required

This implementation is rather straight-forward. The beauty is: you can try various requests, even see the replies, store your collection of requests as example, and load it later again. Also, as this uses only plain HTML/JS/CSS, it can be used as prototype for own projects.

API Requests

The Web API Demo itself uses only very few requests. However, here are the requests listed in the example file which comes with the demo:

- softwareversion
- Handles
- Playbacks/KillAllPlaybacks
- Playbacks/KillPlayback
- Playbacks/SetPlaybackLevel
- Playbacks/FirePlaybackAtLevel
- CueLists/SetNextCue
- CueLists/Play
- CueLists/NextStep
- Playbacks/FlashPlayback
- Playbacks/ClearFlashPlayback
- SwopPlayback
- Playbacks/ClearSwopPlayback
- ShowName
