

Web API request

# Handles/SetGroupName

Sets the name of the current page of a group.

<b>API</b>	<a href="https://api.avolites.com/12.0/Handles.SetGroupName.html">https://api.avolites.com/12.0/Handles.SetGroupName.html</a>
<b>namespace</b>	Handles
<b>usage</b>	<code>http://[ip]:4430/titan/script/2/Handles/SetGroupName?group={string}&amp;name={string}</code>
<b>parameters</b>	group: the string indicating the group name, e.g. Playbacks, Colours, Fixtures name: the new name (legend) for this page
<b>example</b>	<a href="http://localhost:4430/titan/script/2/Handles/SetGroupName?group=Colours&amp;name=hallo">http://localhost:4430/titan/script/2/Handles/SetGroupName?group=Colours&amp;name=hallo</a> (link opens in new tab)
<b>action</b>	Sets the page legend of the current page of a workspace window.
<b>returns</b>	Nothing if successful. "Error: Error executing an Action Script" if an error occurred, e.g. a wrong group was indicated.
<b>remarks</b>	Always changes the current page's name. Works regardless if this window is open or pages are shown or not.
